Legal Notices

We offer information as a service to you. The provided information is based on your requirements and we make every effort to ensure its quality. You agree that you are responsible for using independent analysis and evaluation in designing intended products, and we provide reference designs for illustrative purposes only. Before using any hardware, software or service guided by this document, please read this notice carefully. Even though we employ commercially reasonable efforts to provide the best possible experience, you hereby acknowledge and agree that this document and related services hereunder are provided to you on an “as available” basis. We may revise or restate this document from time to time at our sole discretion without any prior notice to you.

Use and Disclosure Restrictions

License Agreements

Documents and information provided by us shall be kept confidential, unless specific permission is granted. They shall not be accessed or used for any purpose except as expressly provided herein.

Copyright

Our and third-party products hereunder may contain copyrighted material. Such copyrighted material shall not be copied, reproduced, distributed, merged, published, translated, or modified without prior written consent. We and the third party have exclusive rights over copyrighted material. No license shall be granted or conveyed under any patents, copyrights, trademarks, or service mark rights. To avoid ambiguities, purchasing in any form cannot be deemed as granting a license other than the normal non-exclusive, royalty-free license to use the material. We reserve the right to take legal action for noncompliance with abovementioned requirements, unauthorized use, or other illegal or malicious use of the material.

Trademarks

Except as otherwise set forth herein, nothing in this document shall be construed as conferring any rights to use any trademark, trade name or name, abbreviation, or counterfeit product thereof owned by Quectel or any third party in advertising, publicity, or other aspects.

Third-Party Rights

This document may refer to hardware, software and/or documentation owned by one or more third parties (“third-party materials”). Use of such third-party materials shall be governed by all restrictions and obligations applicable thereto.

We make no warranty or representation, either express or implied, regarding the third-party materials, including but not limited to any implied or statutory, warranties of merchantability or fitness for a particular purpose, quiet enjoyment, system integration, information accuracy, and non-infringement of any third-party intellectual property rights with regard to the licensed technology or use thereof. Nothing herein constitutes a representation or warranty by us to either develop, enhance, modify, distribute, market, sell, offer for sale, or otherwise maintain production of any our products or any other hardware, software, device, tool, information, or product. We moreover disclaim any and all warranties arising from the course of dealing or usage of trade.

Privacy Policy

To implement module functionality, certain device data are uploaded to Quectel's or third-party's servers, including carriers, chipset suppliers or customer-designated servers. Quectel, strictly abiding by the relevant laws and regulations, shall retain, use, disclose or otherwise process relevant data for the purpose of performing the service only or as permitted by applicable laws. Before data interaction with third parties, please be informed of their privacy and data security policy.

Disclaimer

- a) We acknowledge no liability for any injury or damage arising from the reliance upon the information.
- b) We shall bear no liability resulting from any inaccuracies or omissions, or from the use of the information contained herein.
- c) While we have made every effort to ensure that the functions and features under development are free from errors, it is possible that they could contain errors, inaccuracies, and omissions. Unless otherwise provided by valid agreement, we make no warranties of any kind, either implied or express, and exclude all liability for any loss or damage suffered in connection with the use of features and functions under development, to the maximum extent permitted by law, regardless of whether such loss or damage may have been foreseeable.
- d) We are not responsible for the accessibility, safety, accuracy, availability, legality, or completeness of information, advertising, commercial offers, products, services, and materials on third-party websites and third-party resources.

1 Introduction

QGNSS is a tool that allows you to interact with Quectel GNSS modules quickly and easily. It enables evaluation, performance testing, development and debugging of Quectel GNSS modules. Tool features are listed below:

- Supports receivers utilizing standard NMEA strings.
- Supports the parsing of RTCM3.x protocol messages.
- Supports log replay.
- Presents all the information collected by the GNSS device. All aspects of GNSS data (positioning, velocity, time, satellite tracking, etc.) can be monitored and logged under various test scenarios for receiver evaluation.
- Supports the downloading of AGNSS data.
- Supports NTRIP client.
- Supports the downloading of firmware update packet to GNSS positioning modules.

2 User Interface Description

2.1. Main Window

The window illustrated below is the main display window of QGNSS. It shows the menu bar, tool bar and positioning information. You can open the sub-window in the central area.

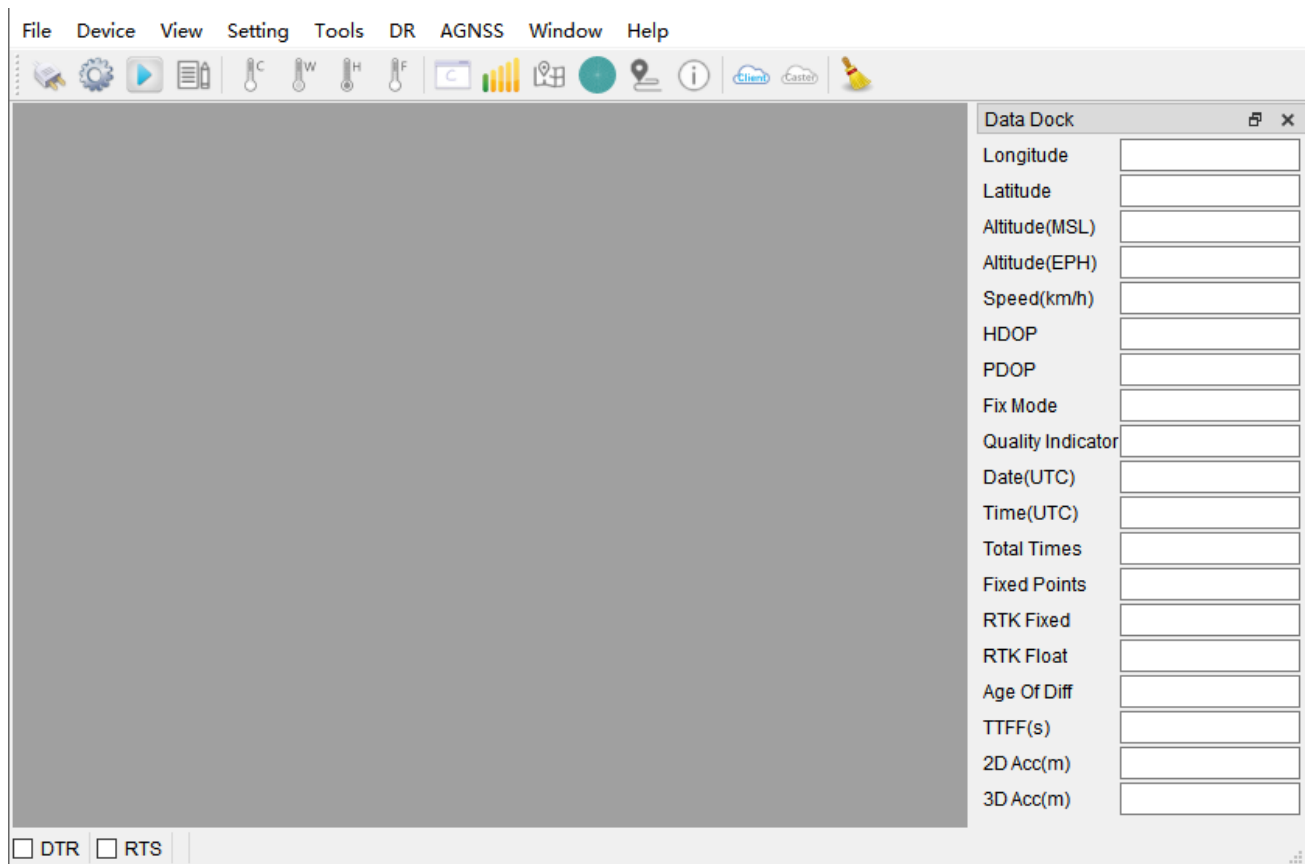

Figure 1: Main Window

2.2. Menu Bar

2.2.1. File Tab

In the “**File**” tab menu:

- Click “**Open**” to open the play dialog box. See [Chapter 3.2 Log Play](#) for details.
- Click “**Show Logfile in Explorer**” to open the folder of the saved log file.
- Click “**Quit**” to close QGNSS.

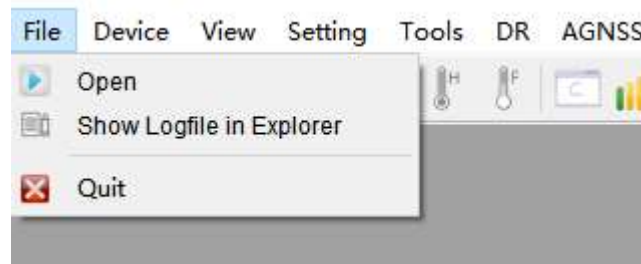

Figure 2: File Tab

2.2.2. Device Tab

In the “**Device**” tab menu:

- Click “**Connect**” to connect to the receiver.
- Click “**Set Device Information**” to configure serial port information. See [Chapter 3.1 Connect to Receiver](#) for details.

Figure 3: Device Tab

NOTE

Make sure to configure the serial port information before connecting to the receiver.

2.2.3. View Tab

In the “**View**” tab menu:

- Click “**Clear**” to clear the data displayed in the Unparsed Data, Text Data and Binary Data.
- Click “**Online Map**” to view the module real time reported location over a map.

About other tabs, see the following sections for more details.

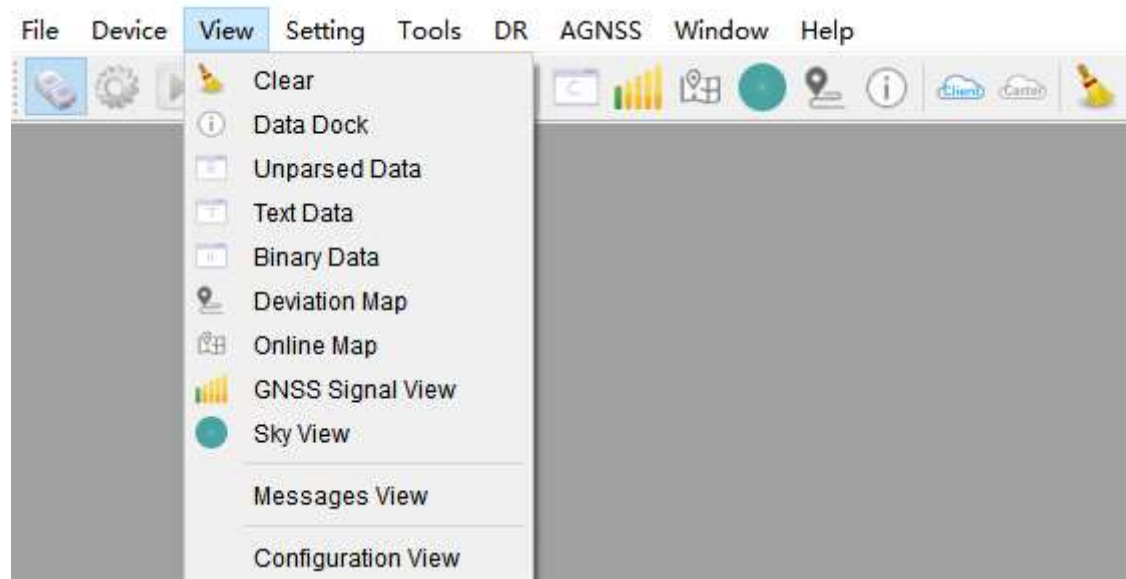

Figure 4: View Tab

2.2.3.1. Data Dock Sub-Window

The “**Data Dock**” sub-window displays detailed information such as longitude and latitude, altitude, and fix mode.

Data Dock	
Longitude	117.11530962
Latitude	31.82159110
Altitude(MSL)	94.30
Altitude(EPH)	90.70
Speed(km/h)	0.00
HDOP	0.79
PDOP	1.21
Fix Mode	3D
Quality Indicator	DGNSS
Date(UTC)	2023-05-10
Time(UTC)	01:38:04.000
Total Times	8
Fixed Points	8
RTK Fixed	0
RTK Float	0
Age Of Diff	
TTFF(s)	
2D Acc(m)	
3D Acc(m)	

Figure 5: Data Dock Sub-Window

2.2.3.2. Unparsed Data Sub-Window

The “Unparsed Data” sub-window displays all data sent by the receiver. There are “Clear”, “Timestamp”, “Pause” buttons and “Filter” at the bottom of the window.

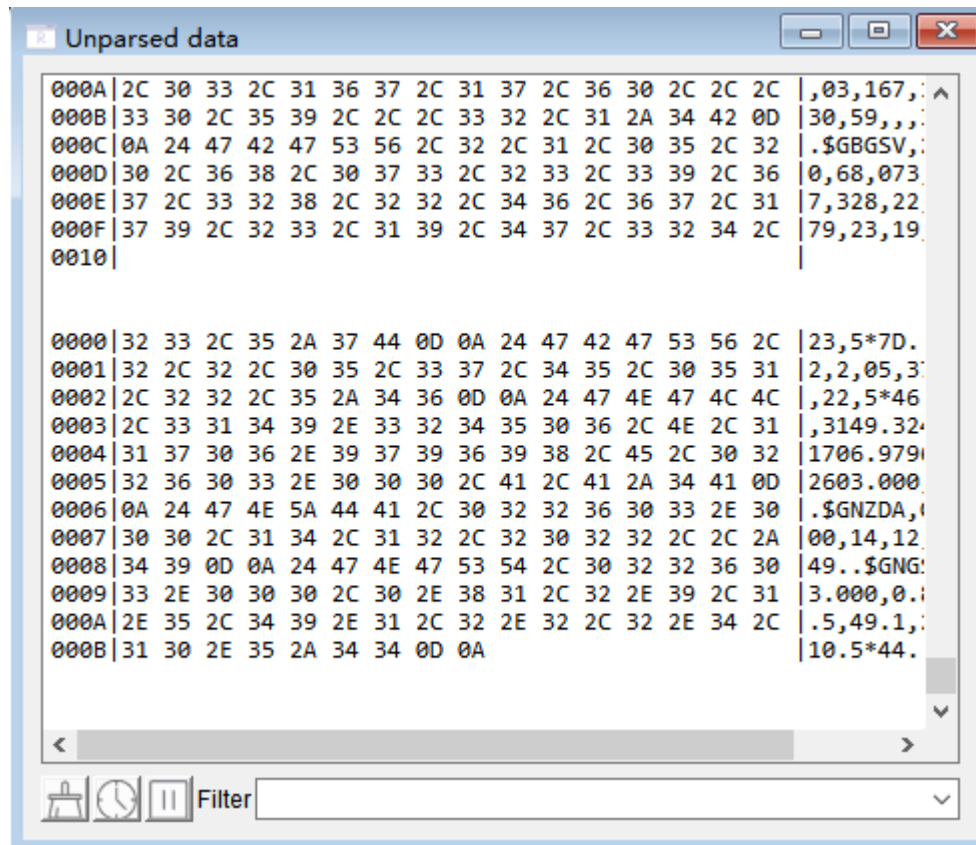

Figure 6: Unparsed Data Sub-Window

2.2.3.3. Text Data Sub-Window

The “Text Data” sub-window displays the NMEA messages. There are “Clear”, “Timestamp”, “Pause” buttons and “Filter” at the bottom of the window.

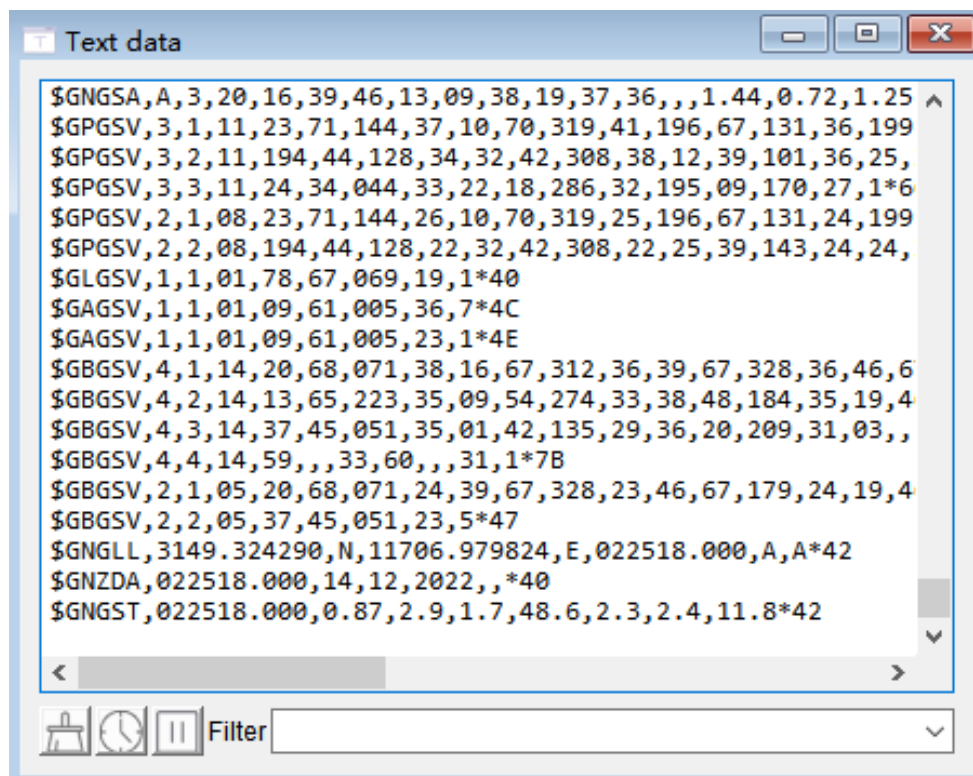

Figure 7: Text Data Sub-Window

2.2.3.4. Binary Data Sub-Window

The “**Binary Data**” sub-window displays the message of the binary protocol. There are “**Clear**”, “**Timestamp**”, “**Pause**” buttons and “**Filter**” at the bottom of the window.

Figure 8: Binary Data Sub-Window

2.2.3.5. Deviation Map Sub-Window

The “**Deviation Map**” sub-window displays positions in longitude and latitude relative to the first positioning point.

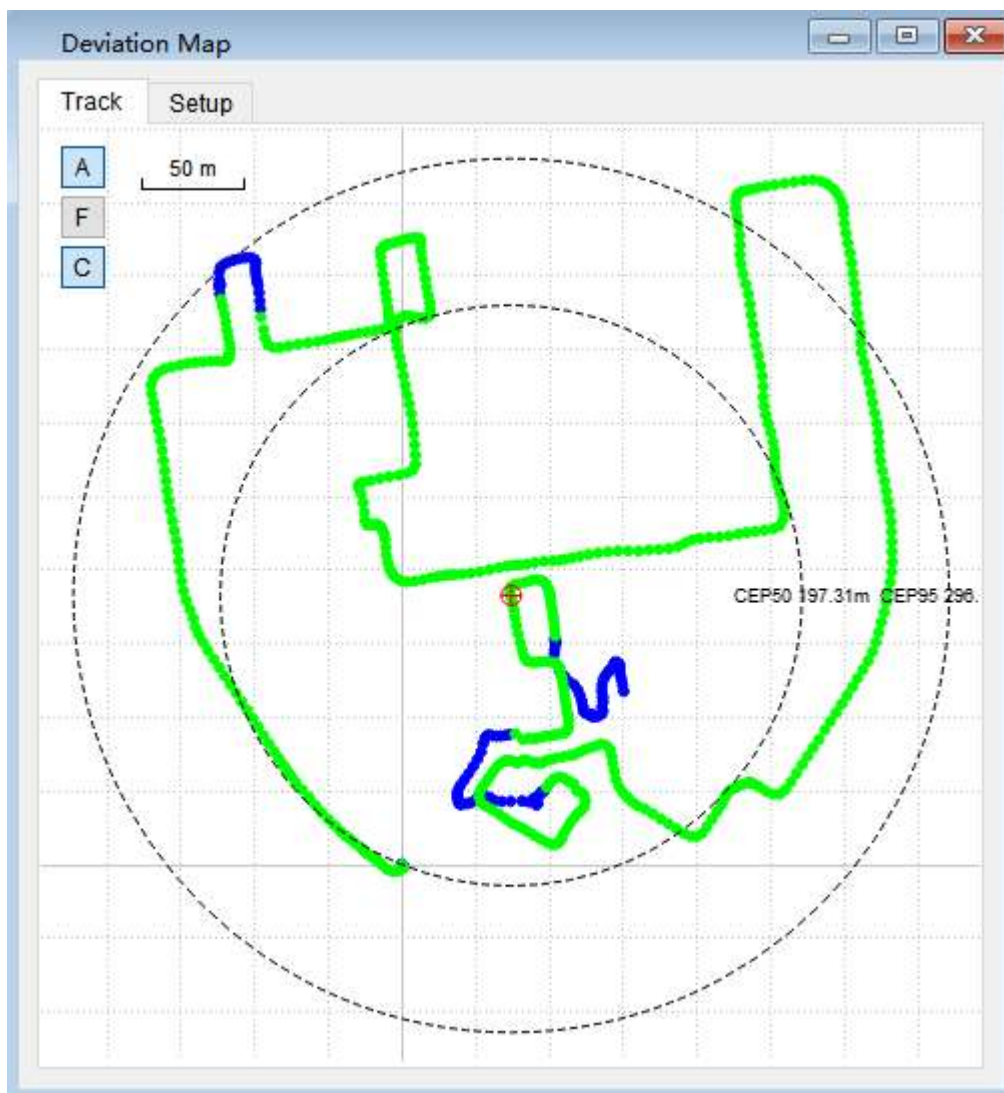

Figure 9: Deviation Map Sub-Window

NOTE

Use the mouse scroll wheel to zoom in/out on the deviation map and hold down the mouse scroll wheel to drag the deviation map.

Table 1: Deviation Map Function Description

Icon	Description
'A'	Display the average point
'F'	Fit track
'C'	Display CEP circle. Use the average point as a reference point by default
Blue Point	Normal positioning point without RTK
Green Point	RTK positioning point
Setup	Click to set the reference point to calculate CEP

2.2.3.6. GNSS Signal View (Signal Level) Sub-Window

The sub-window in the figure below (“**Signal Level**”) displays GNSS signal view. The number above the flag represents the C/N_0 value. The checkbox can be used to select which satellite system can be displayed. If the flag is transparent, it means that the receiver is not tracking this satellite constellation and therefore the data is not present at the NMEA GSA messages.

Figure 10: Signal View (Signal Level) Sub-Window

Table 2: Signal View Function Description

Button	Description
PRN	Satellite number of visible satellites.
BAND	Satellite frequency band.
AZI	Azimuth of satellite in degrees.
ELE	Elevation of satellite in degrees.

2.2.3.7. Sky View Sub-Window

The “**Sky View**” sub-window displays the azimuth and elevation angle (above the Horizon) of each visible navigation satellite per constellation and counts the number of all visible satellites of each positioning system.

Figure 11: Sky View Sub-Window

2.2.3.8. Messages View Sub-Window

The “**Messages View**” sub-window displays the message output by the receiver in the form of a parameter table.

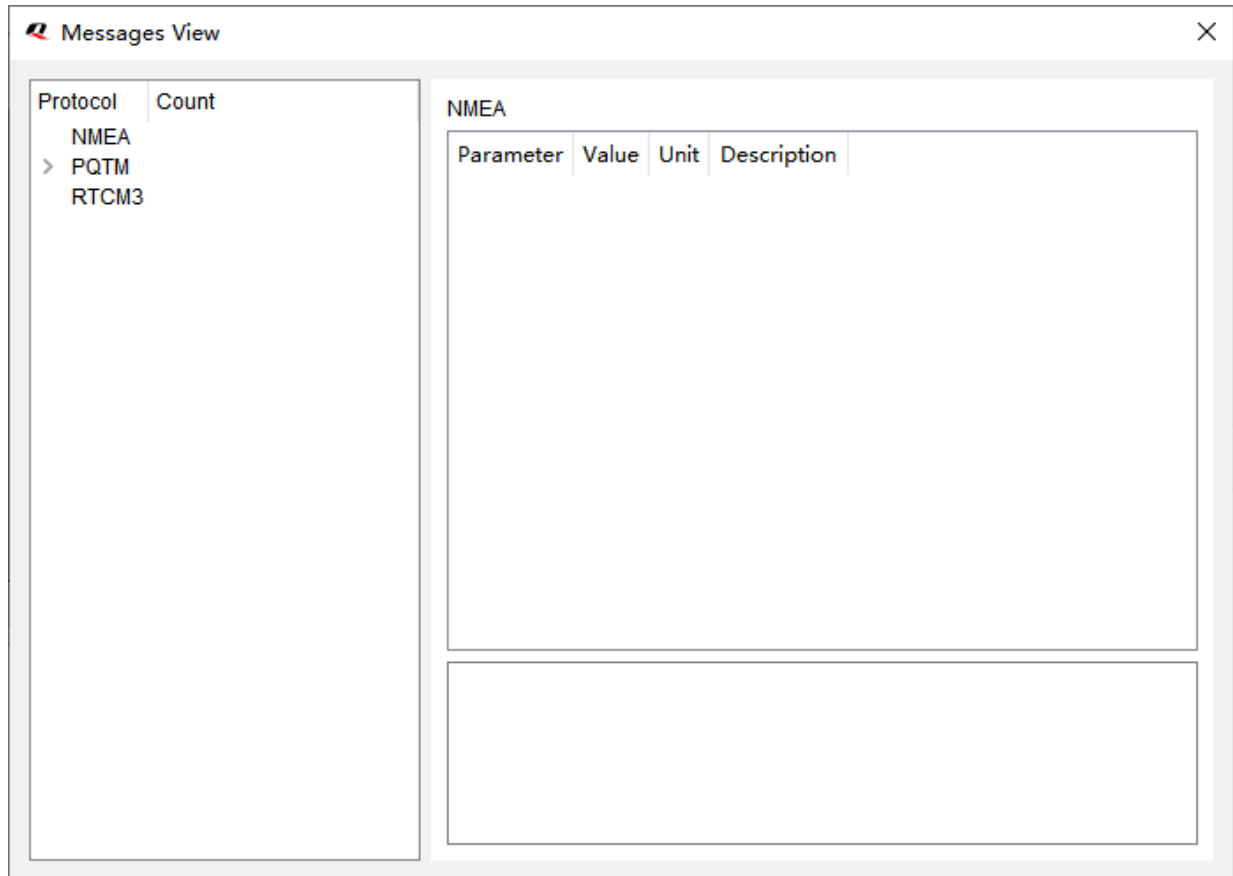

Figure 12: Messages View Sub-Window

2.2.3.9. Configuration View Sub-window

This “**Configuration View**” sub-window is using to modify the receiver configuration. The configuration parameters may change upon the module type.

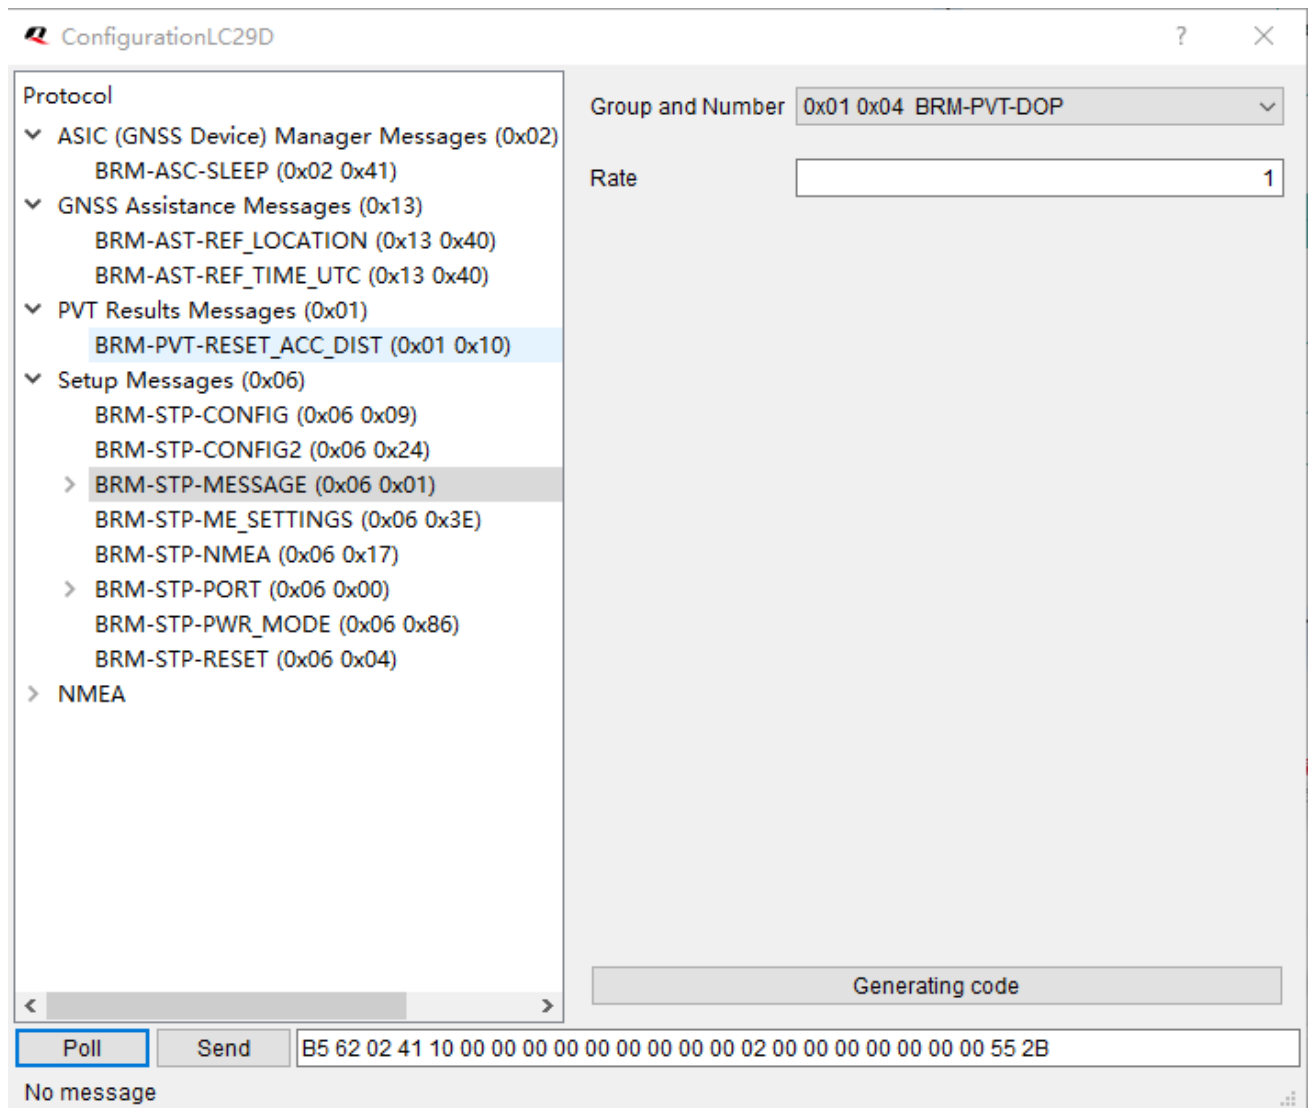

Figure 13: Configuration View Sub-Window

2.2.4. Setting Tab

Click the “**Preferences**” to enter the Preferences Dialog, and set the supported protocol to parse in the Preferences Dialog.

Figure 14: Setting Tab Menu

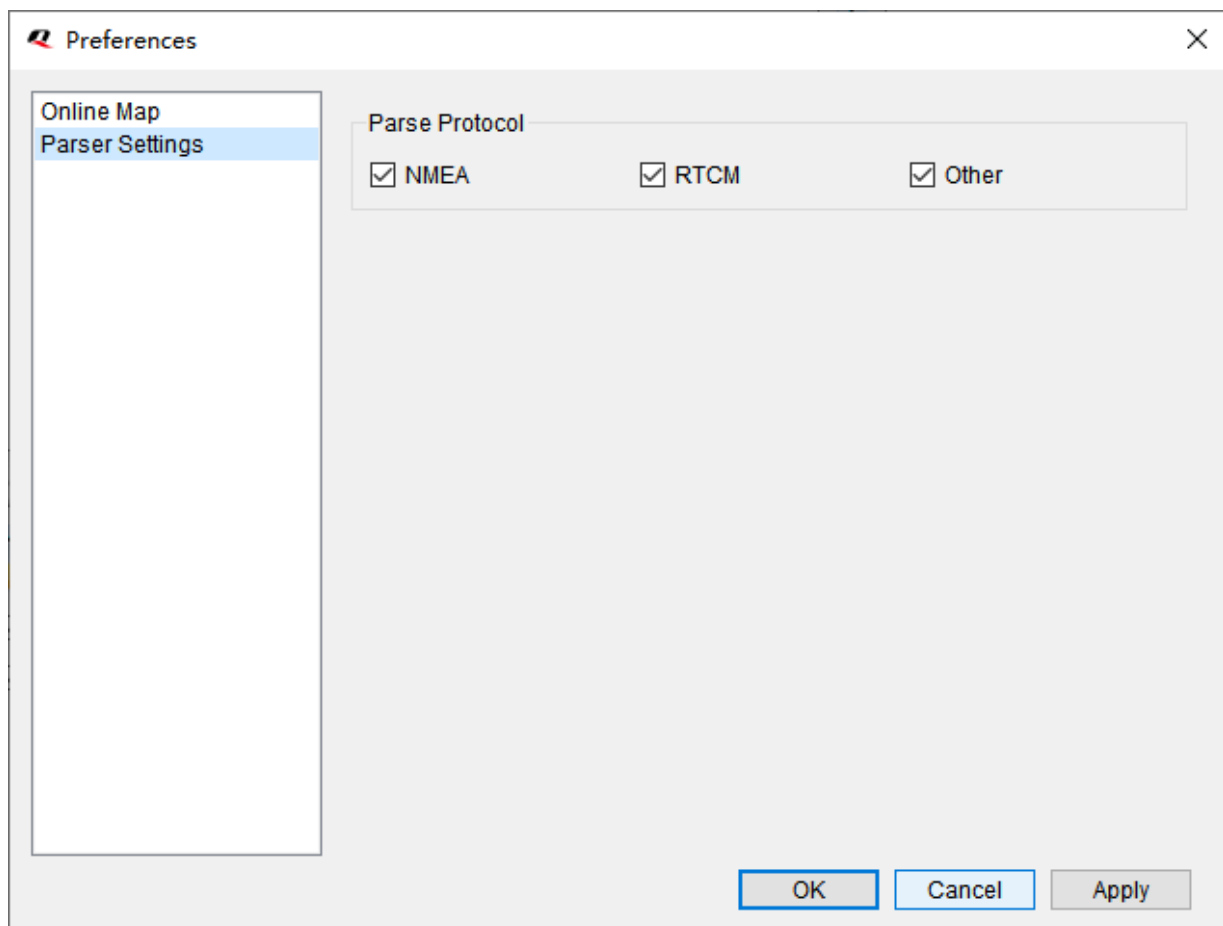

Figure 15: Settings Dialog

2.2.5. Tools Tab

In the “**Tools**” tab menu:

- Select “**Command Console**” to send commands. See [Chapter 3.6 Send Command](#) for details.
- Select “**Static TTFF Testing**” to open the TTFF cycle testing tool. See [Chapter 3.4 TTFF](#) for details.
- Select “**Firmware Download**” to open the receiver firmware upgrade tool. see [Chapter 3.9 Firmware Download](#) for details.
- Select “**QGNSS log**” to open the log analysis tool and follow the instructions step by step.
- Select “**NTRIP**” to connect to NTRIP server, see [Chapter 3.8 Connect to NTRIP Server](#) for details.
- “**Switch Online Map**” can switch between the online maps used by QGNSS.
- Select “**NMEA Convert KML**” to open the tool for converting NMEA logs to a KML file, see [Chapter 2.2.5.2 NMEA Convert KML](#) for details.
- Select “**Coordinate Converter**” to open the coordinate conversion tool, see [Chapter 2.2.5.3 Coordinate Converter](#) for details.

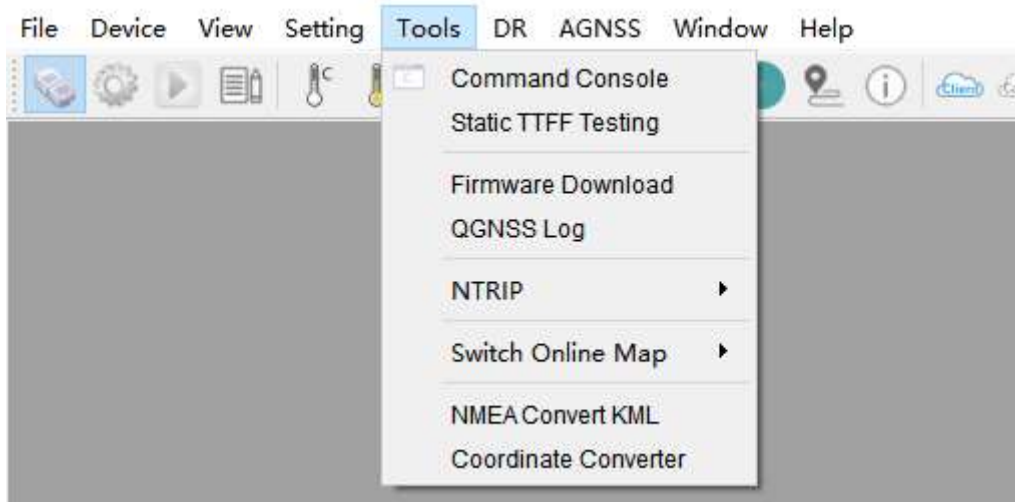

Figure 16: Tools Tab Menu

2.2.5.1. Command Console

The “**Command Console**” tool is used for sending a command.

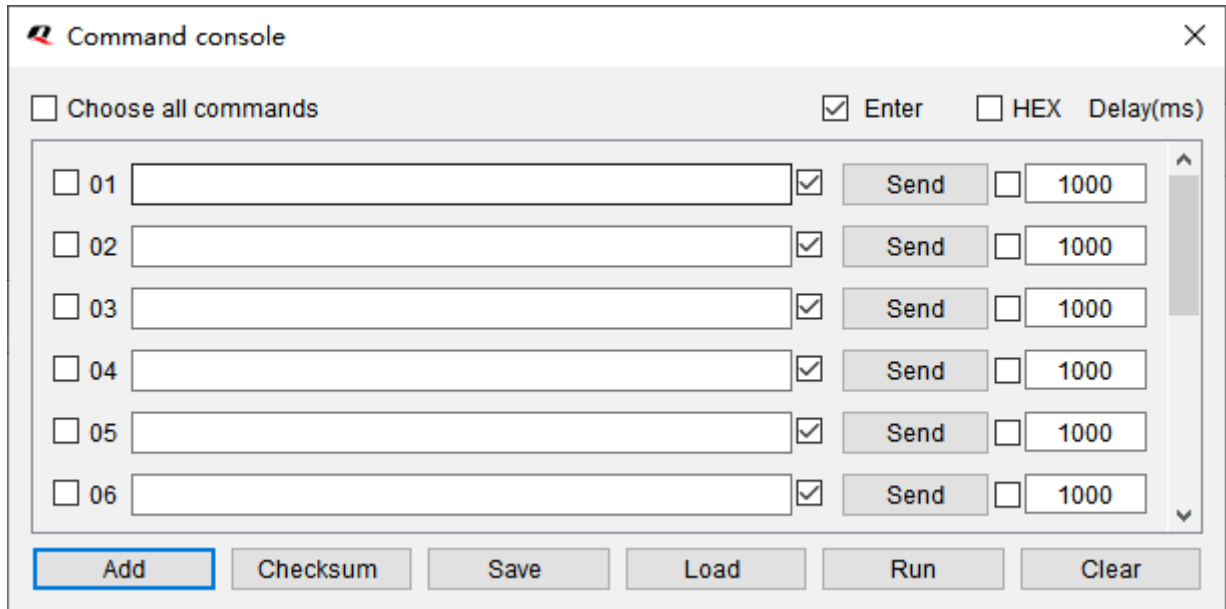

Figure 17: Command Console Tool

Table 3: Command Console Function Description

Button	Description
Enter	Whether "\r\n" is added behind the command.
HEX	If a binary command is sent, HEX checkbox should be selected.
Delay (ms)	After the command is sent, delay N milliseconds to send the next one.
Adds	Add the number of sent commands, and support 99 commands at most.
Checksum	Calculate Checksum for all NMEA commands.
Save	Save the command of the current window to the configuration file.
Load	Load the command from the configuration file to the window.
Run	Send the selected commands in a loop.
Clear	Clear all commands.

2.2.5.2. NMEA Convert KML

The “**NMEA Convert KML**” tool is used for converting NMEA logs to a KML format file.

- Click “**File Name(s)**” to select the NMEA file.
- Click “**File Name**” to select the output file location.
- Click “**OK**” to wait for the conversion to complete.

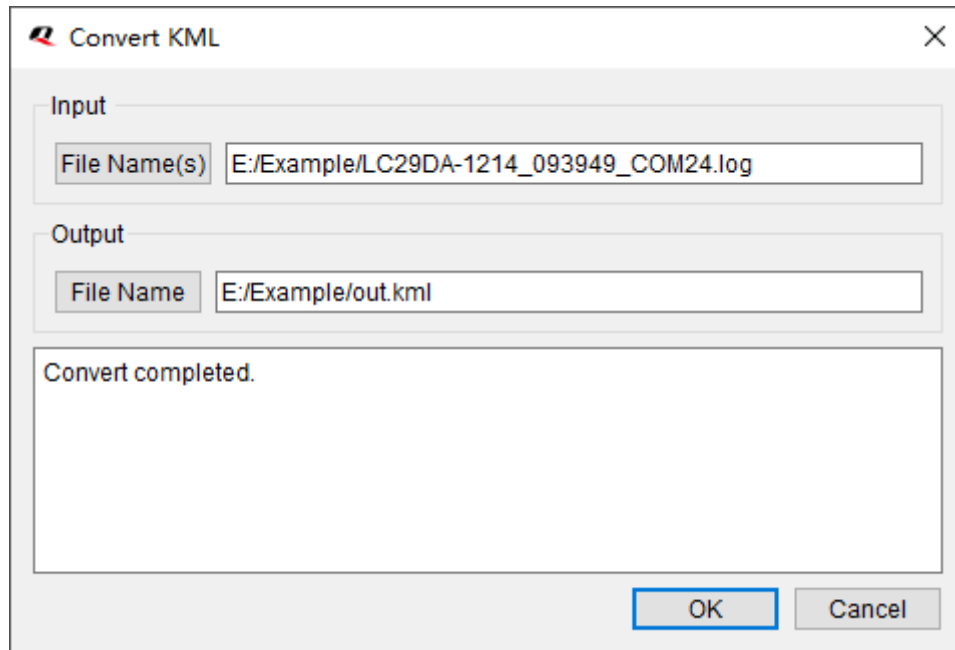

Figure 18: NMEA Convert KML Tool

2.2.5.3. Coordinate Converter

In the “**Coordinate Converter**” tool:

- Select **LLA(Deg)**, **LLA(Deg,Min)**, **LLA(Deg,Min,Sec)** or **ECEF(XYZ)** format and type in the corresponding values, taking “**LLA(Deg)**” as an example:

Coordinate Converter

☒ LLA (Deg)

2.2.6. DR Tab

In the “DR” tab menu, you can query the DR status of the receiver. Different types of receivers have different status of DR interfaces.

DR

Mode

DR Calibration Status

Figure 21: DR Status Window

2.2.7. AGNSS Tab

Via the “**AGNSS**” window, you can download AGNSS files from the FTP server and download AGNSS data to the receiver through the serial port. See [Chapter 3.7 Send AGNSS Data](#) for details.

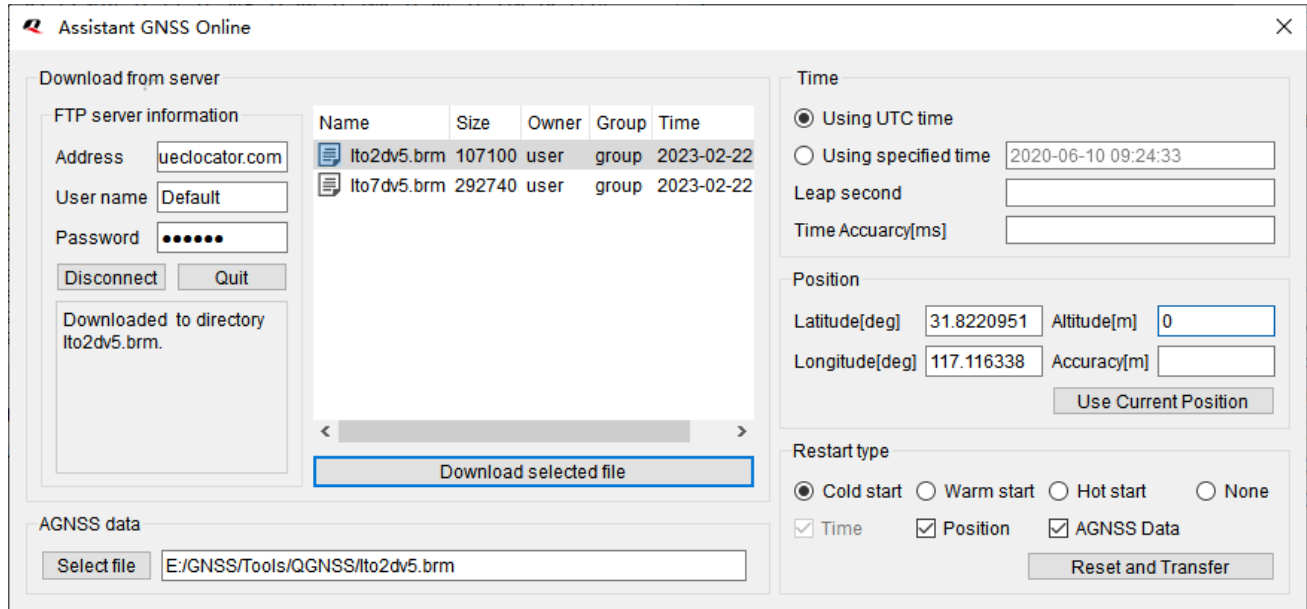

Figure 22: AGNSS Window

2.2.8. Windows Tab

In the “**Windows**” tab menu:

- Click “**Tile pattern**” to display the sub-window(s) to the center.
- Click “**Cascade**” to stack the sub-window(s) to the center.
- Click “**Close All**” to close all sub-windows.

Figure 23: Window Tab Menu

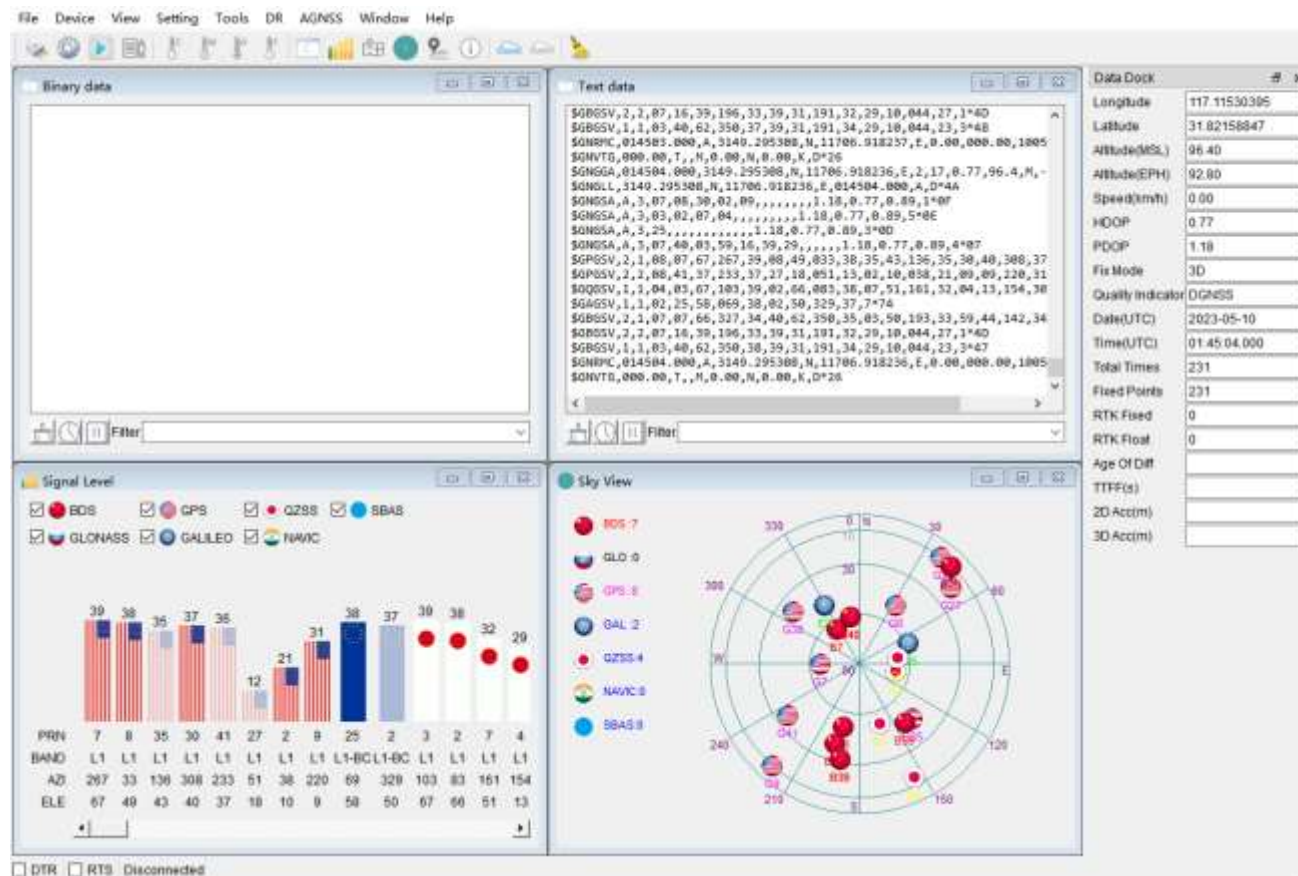

Figure 24: Tile Pattern Window

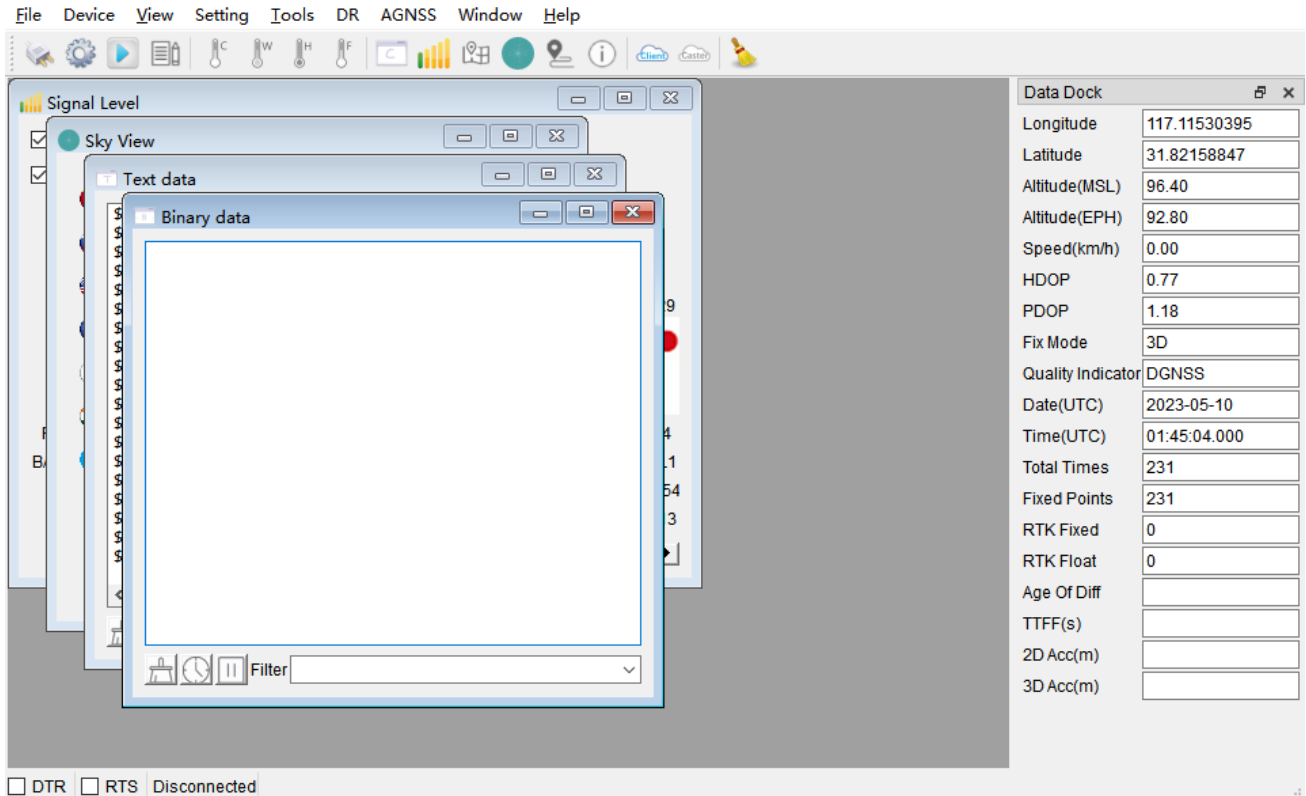

Figure 25: Cascade Window

2.2.9. Help Tab

In the “**Help**” tab menu:

- Click “**Check for Updates**” button to check if the tool is running the latest version of QGNSS.
- Click “**About**” button to see the current software version information.

Figure 26: Help Tab Menu

2.3. Tool Bar

Tool bar can be used for quick access to common operations.

Figure 27: Tool Bar

Table 4: Description of Tool Bar Functions

Icon	Function	Description
	Connect	Serial port connection/disconnection
	Set Device Information	Select module and set serial parameter(s)
	Open	Play log file
	Show Logfile in Explorer	Open the folder containing the saved log file(s)
	Cold Start	Send a Cold start command
	Warm Start	Send a Warm start command
	Hot Start	Send a Hot start command
	Full Cold Start	Send a Full cold start command
	Command Console	Open the Command console dialog
	GNSS Signal View	Open the Signal level sub-window
	Online Map	Open the Online Map sub-window
	Sky View	Open the Sky view sub-window
	Deviation Map	Open the Deviation map sub-window

Icon	Function	Description
	Data Dock	Open the Dock window (Data Dock and Analysis)
	NTRIP Client	Open the NTRIP Client dialog
	NTRIP Caster/Server	Disabled (not supported currently)
	Clear	Clear interface data

3 Common Operations

3.1. Connect to Receiver

Follow the below steps to connect the receiver to the QGNSS software utility:

Step 1 Run the QGNSS tool.

Step 2 Click the “**Set Device Information**” button on the tool bar to open the “**Device Information**” window.

Figure 28: Open Serial Port Configuration

Step 3 Select the module and serial port parameters, and then click the “**OK**” button.

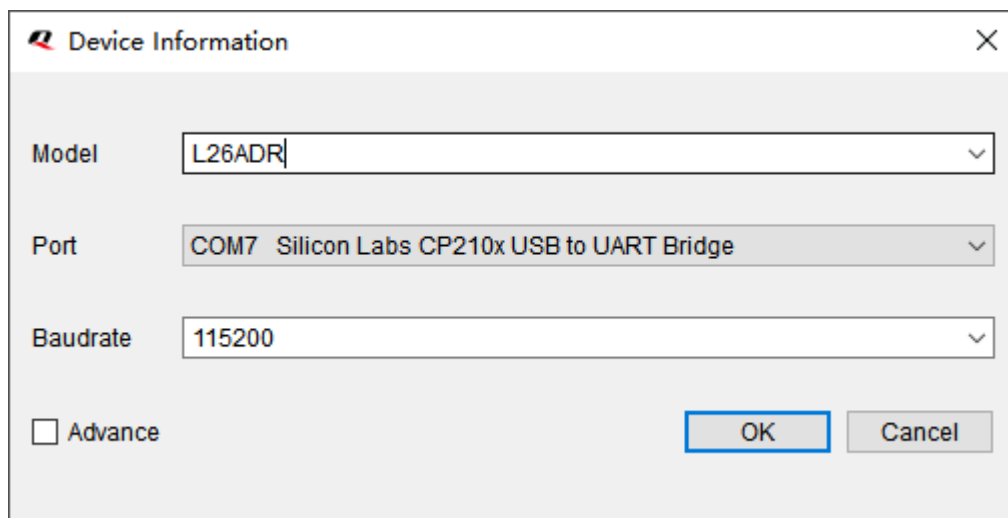

Figure 29: Serial Port Configuration Dialog

3.2. Log Play

Steps to replay a recorded log file:

Step 1 Click the “**Play**” button to open the play dialog box.

Figure 30: Log Play

Step 2 Select the file, and the play control window will pop up.

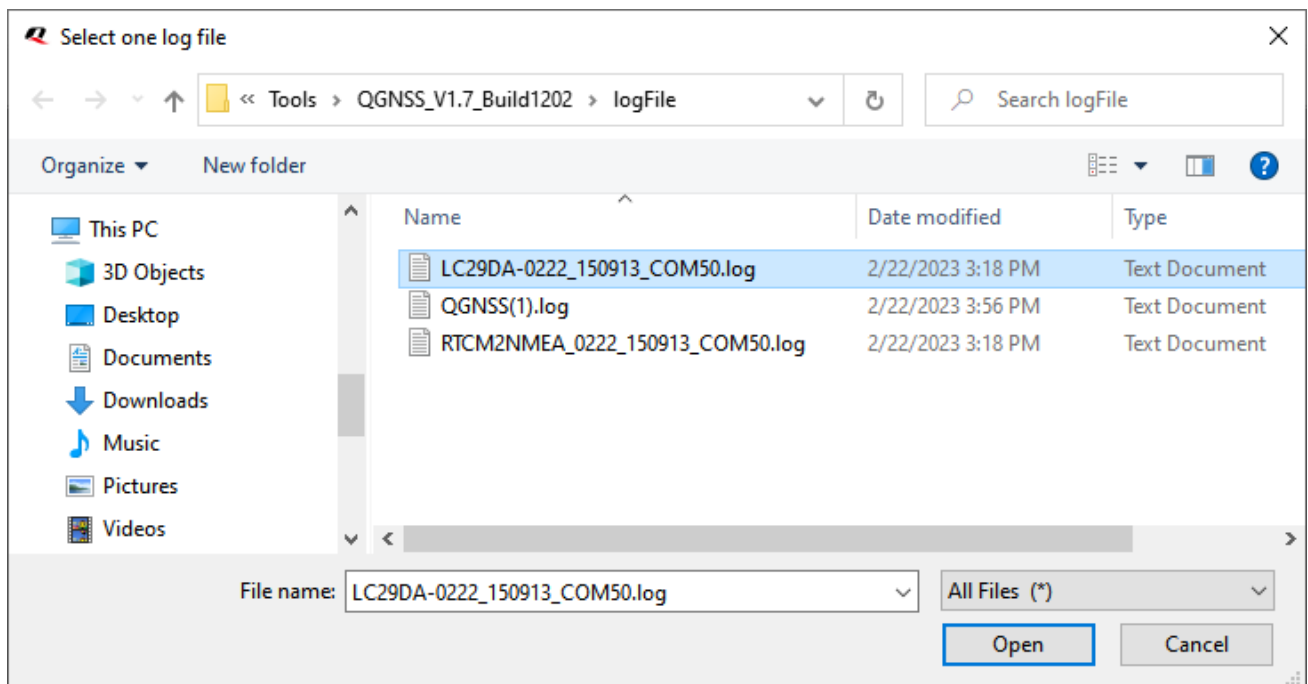

Figure 31: Select the File

Step 3 Select the Read Rate(B/s) value, and then click “Exit” button.

Figure 32: Play Controller

Table 5: Controller Function Description

Button	Description
	Play and pause
	Play progress bar, click to drag the progress bar.
Read Rate 512B/s ▾	File reading speed
Exit	Exit

3.3. Restart Receiver

Choose a restart type and click the corresponding button in the tool bar to send the restart command to the receiver. For the description of these buttons, see [Table 4: Description of Tool Bar Functions](#) .

Figure 33: Restart Receiver

3.4. TTFF

Click “**Static TTFF Testing**” to open the TTFF window.

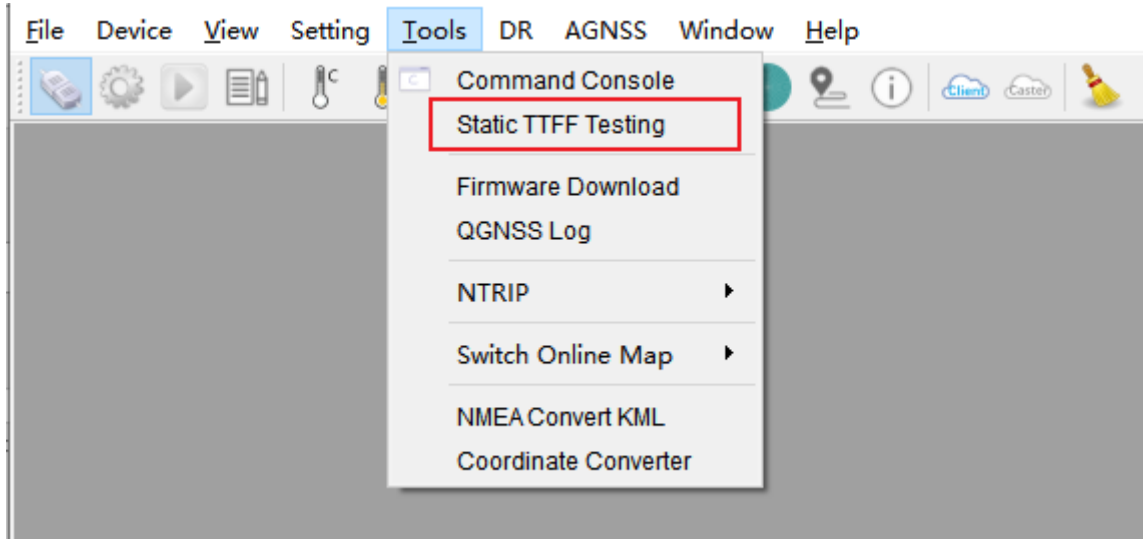

Figure 34: Open TTFF Window

Step 1 Choose a “**Restart type**”.

Step 2 Enter “**Number of tests**” and the “**TTFF Time-out(Sec)**” of each test.

Step 3 Click “**Run**” button.

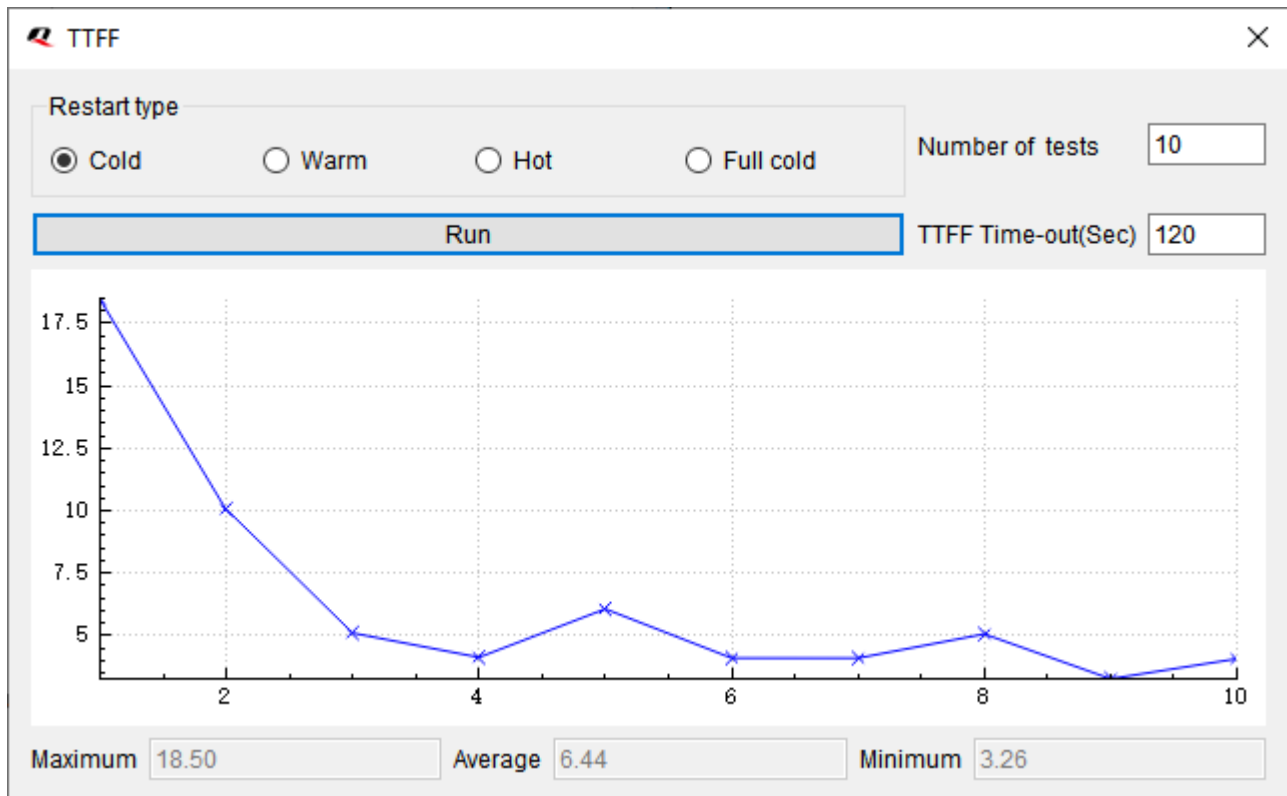

Figure 35: TTFF View

NOTE

Save the TTFF test log file (TTFF_xxx_xxx.log) in the log folder. Open the folder to view the log file.

3.5. Configure Receiver

Click “**Configuration View**” in the “**View**” tab drop-down menu to open “**Configuration View**” window.

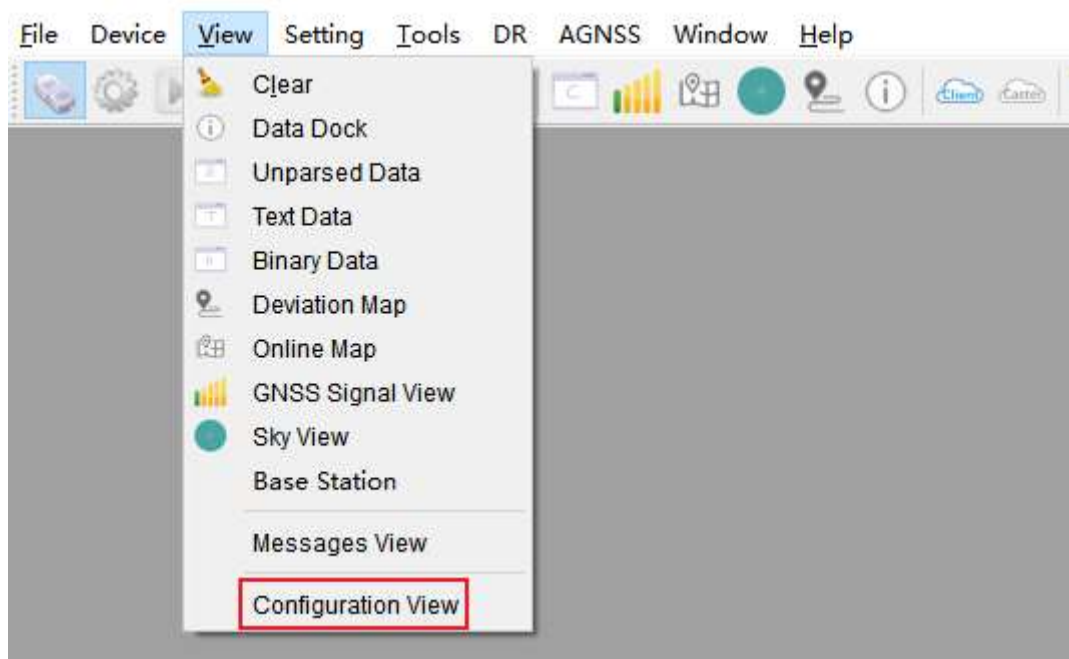

Figure 36: Open Configuration View

Step 1 Select the parameters that need to be configured and click “**Generating code**” button.

Step 2 Click “**Send**” button to send the generated code to the receiver.

If the parameters support the query, click the “**Poll**” button to query the configuration parameters.

Figure 37: Configuration View

3.6. Send Command

Click the “**Command Console**” in the “**Tools**” tab drop-down menu to open “**Command Console**” window. See [Figure 17 Command Console Tool](#) for details of “**Command Console**” interface.

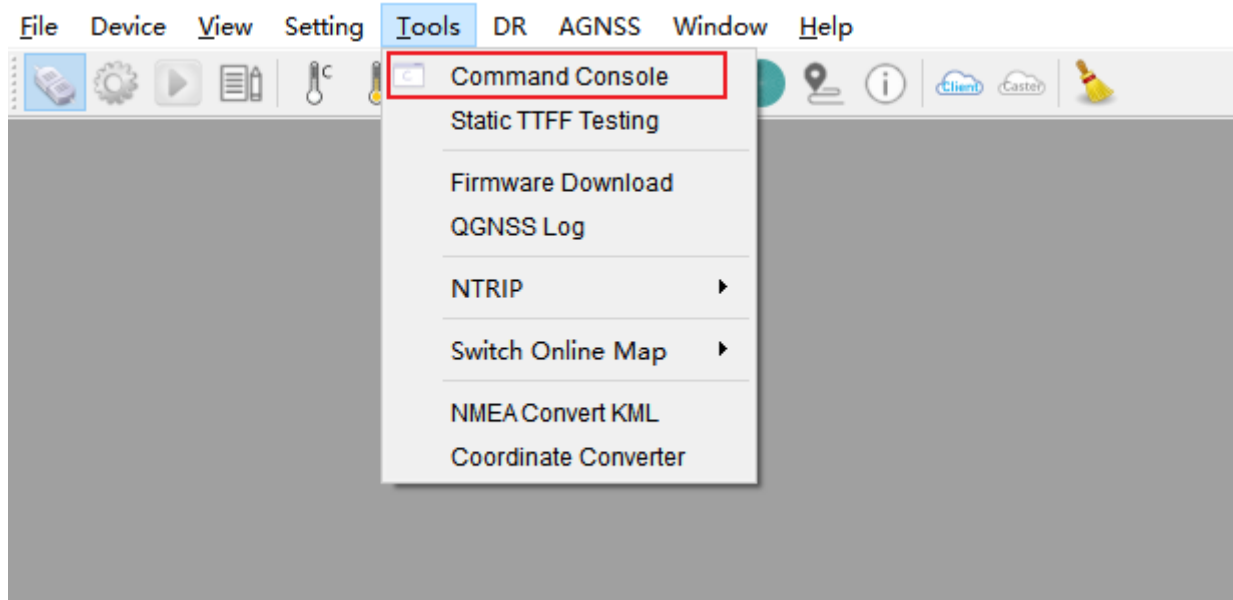

Figure 38: Open Command Console

Send one command at a time:

1. Enter the command to be sent in the command box.
2. Click "**Send**" to send the command.

Send the selected commands in a loop:

1. Enter the commands to be sent in the command boxes one by one.
2. Select the checkboxes of the commands to be sent.
3. Click "**Run**" to send the commands in a loop.

For description of the functions of other buttons, see [Table 3: Command Console Function Description](#).

3.7. Send AGNSS Data

Click “Assistant GNSS Online” in the “AGNSS” tab drop-down menu to open “AGNSS” window.

Figure 39: Open AGNSS Window

Step 1 Get AGNSS file:

1. Click “Connect” to connect to the FTP server.

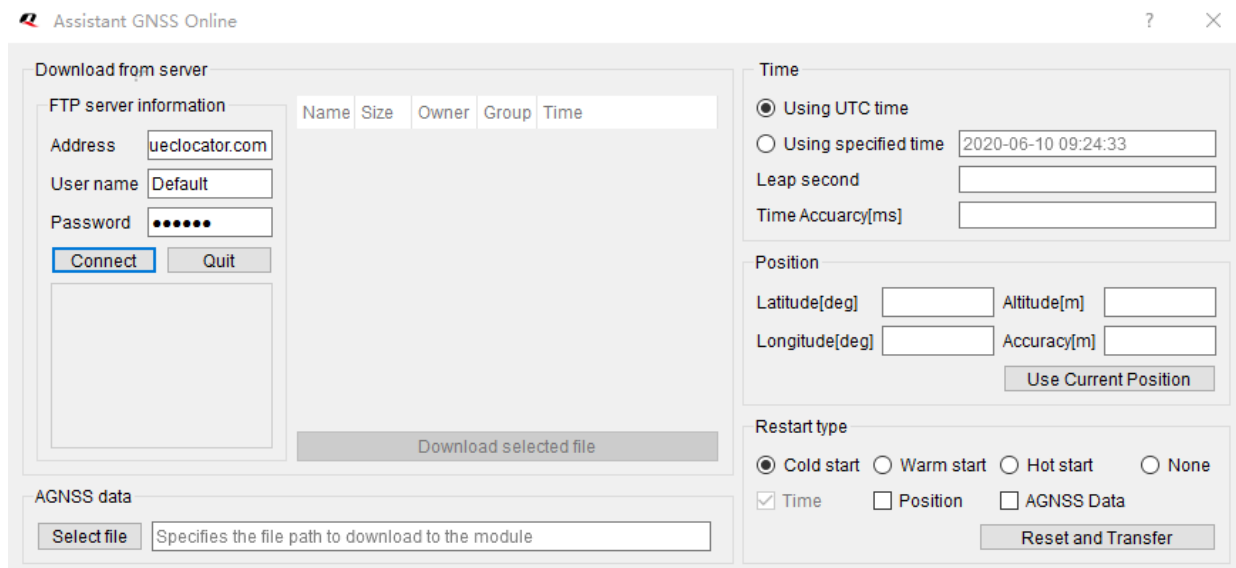

Figure 40: Connect to FTP Server

NOTE

AGNSS file is used to improve the TTFF duration by providing long duration Ephemeris to the receiver.

2. Select the AGNSS file to be downloaded and click “Download selected file”.

3.8. Connect to NTRIP Server

The NTRIP is a gateway for the module to receive RTK corrections. Click “**NTRIP Client**” in the “**Tools**” tab drop-down menu to open “**NTRIP Client**” window.

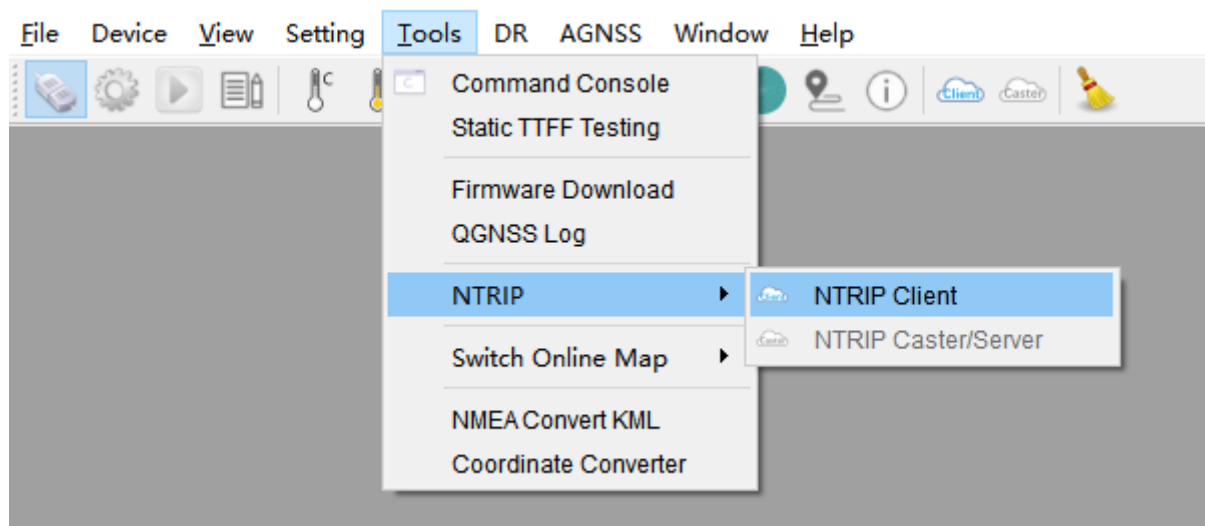

Figure 43: Open NTRIP Client

- Step 1** Enter the Address, Port, Username and Password. Contact Quectel Technical Support (support@quectel.com) to get the Username and Password if necessary.
- Step 2** Click “**Update NTRIP source table**” to wait for the server to return mount point information.
- Step 3** Select “**NTRIP mount point**”.
- Step 4** Enter “**Request Interval**”.
- Step 5** Tick the checkboxes in front of “**Use manual position**”, you can enter custom data, otherwise the fixed position of the module will be used.
- Step 6** Turn on the “**Connect to Host**” switch.

3.9. Firmware Download

Connects the receiver according to the [Chapter 3.1 Connect to Receiver](#). Click “Firmware Download” in the “Tools” tab drop-down menu to open “Firmware Download” window.

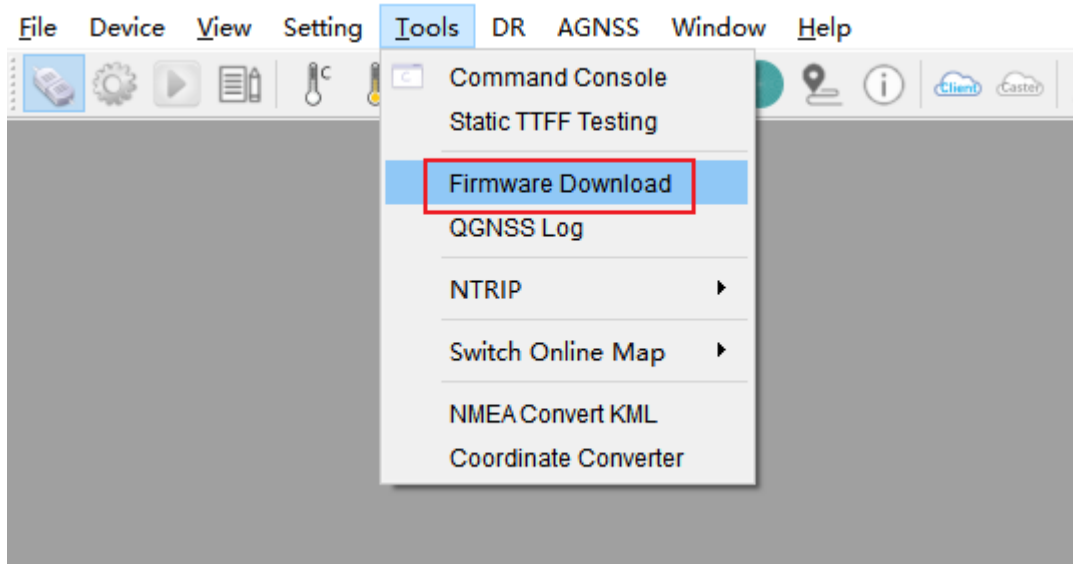

Figure 45: Open Firmware Download

- Step 1** Click  to select the receiver firmware.
- Step 2** Click  to wait for the firmware download to complete.
- Step 3** Reset module.

NOTE

The steps of using the QGNSS tool to download the firmware may vary from module to module, see firmware upgrade guide document of specific module for details.

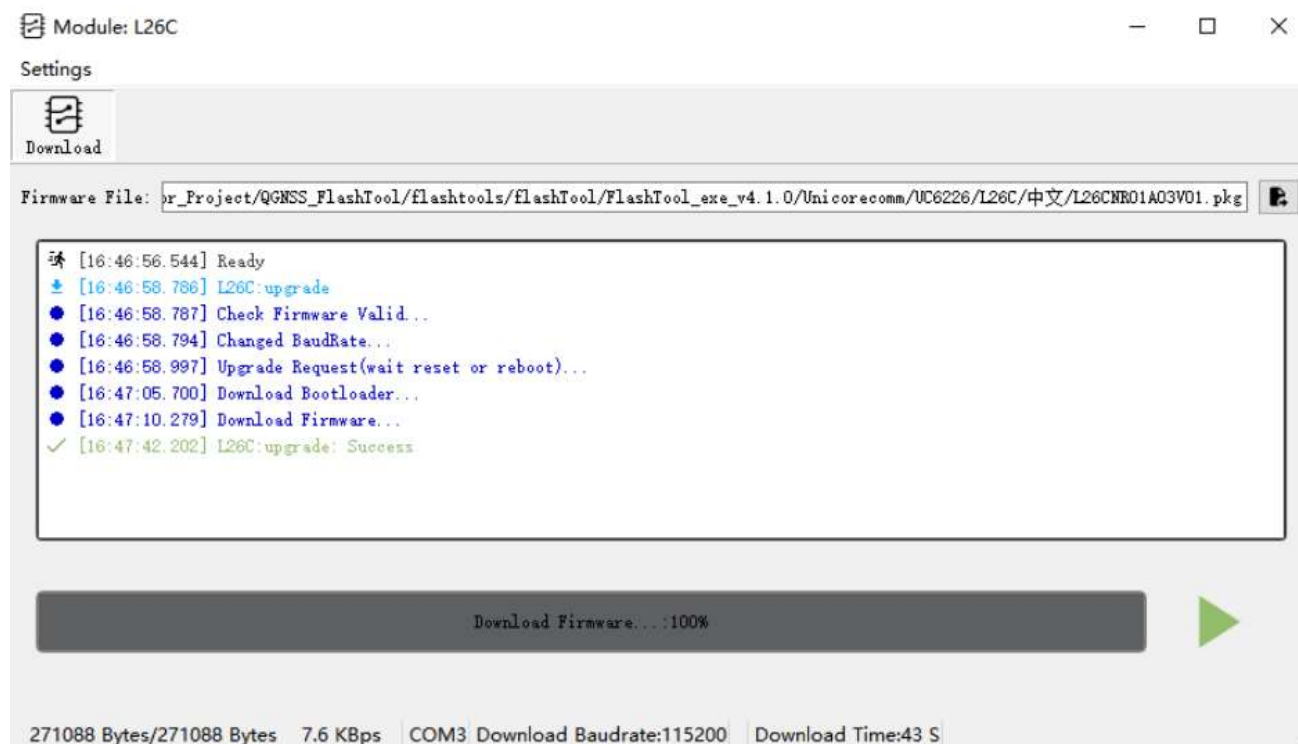

Figure 46: Firmware Download

4 Appendix References

Table 6: Terms and Abbreviations

Abbreviation	Description
AGNSS	Assisted GNSS
BDS	BDS Navigation Satellite System
C/N ₀	Carrier-to-Noise-Density Ratio
CEP	Circular Error Probable
DR	Dead Reckoning
EPH	Ellipsoid Height
GLONASS	GLONASS Navigation Satellite System
GPS	Global Positioning System
IRNSS	Indian Regional Navigation Satellite System (NavIC)
KML	Keyhole Markup Language
MSL	Mean Sea Level
NTRIP	Networked Transport of RTCM via Internet Protocol
PRN	Pseudo Random Noise Code
QZSS	Quasi-Zenith Satellite System
RTK	Real-time Kinematic
SBAS	Satellite-Based Augmentation System
TTFF	Time to First Fix
